___ PRIMARY CARE ASSOCIATES
MEDICAL CLEARANCE FOR EXERCISE

Date: 2024-05-06
To: Northside Fitness Studio
Re: Denver Lang, DOB 1947-08-14

Mr. Lang is cleared for moderate-intensity supervised exercise.

Relevant history:
Coronary artery bypass grafting in 1997, no angina since. Type 2 diabetes with peripheral neuropathy. Knee osteoarthritis under physiotherapy care. Blood pressure runs low-normal (88 to 95 systolic) on his current medicines.

Recommendations:
1. Moderate intensity: able to talk in full sentences; rate of perceived exertion 11 to 13 of 20. Heart rate response may be blunted, so use perceived exertion rather than heart rate.
2. Warm up and cool down for 10 minutes. Avoid breath holding during lifts.
3. Inspect feet after sessions; wear proper shoes and socks.
4. Stand up slowly after floor exercises; stop for dizziness.
5. Stop and seek care for chest pain, unusual shortness of breath, or fainting.
6. Low-impact work only for the knees, following the physiotherapy plan.
