___ WALK-IN CLINIC
PROVIDER NOTE

Name: ___ Unit No: ___
Date of Service: 2025-01-14 Provider: ___, PA-C

Chief Complaint:
Left wrist pain after slipping on ice this morning.

History of Present Illness:
77 year old man slipped on an icy driveway and landed on an outstretched left hand. No head strike, no loss of consciousness, no dizziness before the fall. Pain 5/10 on the back of the wrist.

Physical Exam:
Mild swelling dorsal left wrist. No snuffbox tenderness. Full finger movement. Grip painful. Sensation and pulses intact.

Imaging:
Left wrist X-ray, 3 views: no fracture or dislocation; mild degenerative change at the first carpometacarpal joint.

Assessment:
Left wrist sprain.

Plan:
1. Wrist splint for comfort for up to 2 weeks.
2. Acetaminophen 500 to 1,000 mg every 8 hours as needed. Avoid ibuprofen given his heart history.
3. Ice-gripping shoe covers for winter walks.
4. Return if pain persists beyond 2 weeks or snuffbox pain develops.
