MALDEN COMMUNITY NUTRITION
MEDICAL NUTRITION THERAPY - FOLLOW-UP

Client: Denver Lang Date: 2025-02-10
Dietitian: ___, RD, LDN Visit length: 30 min

ASSESSMENT
Weight 88.4 kg (-6.6 kg since 2024-04-08). Plateau since November; holiday eating and fewer walks after a wrist sprain on 2025-01-14. Dizziness resolved after hydrochlorothiazide was stopped. Protein at breakfast most days. Beer 2 evenings a week.

DIAGNOSIS
Weight plateau related to reduced activity and holiday intake.

INTERVENTION
1. Protein about 1.0 g per kg (90 g/day) to protect muscle during weight loss at his age: eggs, yogurt, fish, beans.
2. Swap evening snack for fruit or yogurt.
3. Indoor walking at the mall on icy days.

MONITORING AND EVALUATION
Goal 86 kg by summer 2025. Next visit in 4 months.
