Reproductive endocrinology consultation

Patient	Maya Chen | SYN-MAYA-001	Clinical date	2024-01-12
DOB / age	1993-03-14 / 30 years	Record	D016
Provider	Dr Neri Solan	Status	Final

2024-01-12

Dr Elara Vale, Example Orchard Family Practice

Re: Maya Chen, DOB 1993-03-14

Assessment

Dear Dr Vale: Maya has now attempted conception for over twelve months without pregnancy. Regular cycles and progesterone 38 nmol/L on December 20 support ovulation. Baseline ultrasound shows AFC 15 and no cavity lesion. AMH 18.6 pmol/L, FSH 6.2 IU/L, TSH 1.85 mIU/L. G0P0.

Partner context

Partner assessment documented separately: semen concentration 48 million/mL, progressive motility 42%, morphology 5% on December 8, 2023, within that synthetic laboratory reference limits. These are partner facts, not Maya laboratory values.

Plan

Tubal patency remains unassessed, so unexplained infertility is provisional. Discuss expectant management, ovarian stimulation with IUI, and IVF. Continue folic acid. Arrange HSG early in a cycle after negative pregnancy test.
