MALDEN COMMUNITY NUTRITION
MEDICAL NUTRITION THERAPY - INITIAL VISIT

Client: Denver Lang DOB: 1947-08-14
Date: 2024-04-08 Referring: ___, MD
Dietitian: ___, RD, LDN Visit length: 60 min

ASSESSMENT
Anthropometrics:
Height 176.8 cm Weight 95.0 kg BMI 30.4 kg/m2
Waist circumference 112 cm
Usual weight 87 kg in 2019; gain of 8 kg over 4 years.
Biochemical (2024-03-14, from referral):
HbA1c 5.4%. LDL 130 mg/dL.
Clinical:
Type 2 diabetes on metformin, hypertension, CABG 1997, knee osteoarthritis. No hypoglycemia reported.
Diet history (24-hour recall and usual intake):
Breakfast: white toast x2 with butter, coffee with 2 sugars.
Lunch: deli sandwich, chips, regular soda.
Afternoon: cookies or muffin.
Dinner: large portions of pasta or meat with potatoes; vegetables 2 to 3 times a week. Beer 1 to 2 most evenings.
Estimated intake 2,600 kcal/day; estimated need 2,000 kcal/day for 0.5 kg/week loss.
Activity: walks 10 to 15 minutes, limited by knee pain.

DIAGNOSIS
Excessive energy intake related to large portions and sugar-sweetened drinks as evidenced by 8 kg gain and estimated intake 600 kcal above need.

INTERVENTION
1. Plate method: half vegetables, quarter lean protein, quarter whole grains.
2. Replace regular soda with sparkling water; coffee with 1 sugar then none.
3. Limit beer to 3 evenings a week.
4. Keep a 3-day food diary before the next visit.
5. Consistent carbohydrate at meals to match metformin.

MONITORING AND EVALUATION
Weight monthly; food diary review. Goal 0.5 kg per week, first target 90 kg by September 2024. Follow-up in 8 weeks.
