FELLSWAY PHYSIOTHERAPY
INITIAL ASSESSMENT - UPPER LIMB

Patient: Denver Lang DOB: 1947-08-14
Date: 2025-06-02 Self-referred
Physiotherapist: ___, PT, DPT

SUBJECTIVE
Right shoulder ache for 3 weeks after adding overhead band presses at the gym. Pain 4/10 reaching overhead and at night lying on the right. History of right clavicle fracture in 2019, healed. No neck pain or arm numbness.

OBJECTIVE
Painful arc 80 to 120 degrees abduction. Flexion 160 degrees. External rotation strength 4/5 with pain. Hawkins-Kennedy positive. Neer positive. Empty can mildly painful, strength 4/5.

ASSESSMENT
Right rotator cuff related shoulder pain (tendinopathy) from load increase.

PLAN
4 sessions over 6 weeks. Pause overhead pressing; rotator cuff and scapular strengthening; return to pressing below shoulder height. Message sent to trainer with exercise changes, with patient's consent.

___, PT, DPT
